wood in a bag. When a Rectal exam. is to be made by appointment Tells it that woman does not urinate some hours at least before for bladder will force of uterus down. Tell her to use the levator and.

Suppositories

	Sand	Tubes filled with powdered glass	Sand Dust
Immersed in			
alcohol	85	175.	125
water	175	182	60

Salines — alkaline

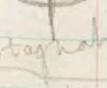
Narcotics of Opium — Acts upon light. Morphine — Loose. Codeine — Yellow Cast of Codeine, hypno-motive property when air is warm we pad with moisture. Vinegar & lime water (Soapy) apply to rag, or raw cotton for burns. Of Ba absorbing water when atmosphere wet. Turpentine oil & wax for burns, inebriation

transudation. endosmose & Exosmose. Capillary attraction. If a wick were to have affinity for it, it will rise. Miscible, belongs to inorganic as to organic. Bladder over a vessel with alcohol & water will allow ~~also~~ water to go out. Keeps alcohol in gives opposite.

Dickson. Sunday October 22nd.

Some medicines act directly on the blood, disintegrating it. Medication of purulent matter, whether being in small-pox air her face has small-pox in hers. She herself escaping it. Reads blood by absorption from without. Medicines may act by nervically by their presence & not making much first change, have an acute sense of touch. Pulse not always a true ~~to~~ Va-

Hyperæmia. Distribution, no general
hyperæmia of plethora relative
active, result of irritation &
congestion / caused determined
now / Hyperæmia is not
always disease, eg blush
etc. Physiologic & adive.
Spleen easily yields. Blood driven
to certain parts not sought for.
Congestion when nothing but abundance
no change in proportion, secretion
in less parts. Irritation must
be added to make inflammation
Irritation may be without inflam. sneezing etc.
Inflam. shown in contractile & sensitive
tissues. Pain & spasm. Inflexible tube
Conveys water quicker & greater force
than flexible tube. Contraction then
Expansion. Centres of stagnation.



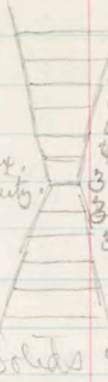
Dr. Gross. Capillaries
Minute tubes between
arteries & veins. One distinguish
ed Color of blood. Dens. does

Exciting Causes 1. Chemical. 2. Constitutional. 3. Mechanical.

Not traumatic Contusion. Lacerated particles. ~~Red~~ Corpuscles flattened ~~Colorless~~ Serum. White Corpuscles ~~flattened~~ sphere. White Fewer Rounder, finely granulated surface. White Red Close to inner surface. Red in (interior) (middle) 1st. in inflam. dilation of capillary. contraction in capillary. 2. quick circ. 3. Stagnation. 4. Coats of vessels inflamed & thus ~~fatty~~ degeneration, exudation. Foot with alcohol, heart aroused by means Sympathetic, now red & white mix together, red & white both more flattened than usual, Coercive property increased. Change from scarlet to deep red. Vessels forward, effusion of ~~contents~~, in during stage extravasated. Serum, Plastic matter, pus, pure blood. Nervous filaments much contracted & probably cut off. Nerves, gives rise to Convulsion & inflammation. Pain (pain). terminations 1. Life. 2. Death (& part). & its spasms; modification. — Treatment. 1. Remove Cause, 2. Establish — ment of Part to healthy. Nature Seat of action; these in latent inflam. treat it as general

3.
Principles. Remove cause of Evident.

Bache, 3. gases & vapors all
Expand alike with
Equal increment of
heat, air at 32° if
it gets to 33° has in-
creased $\frac{1}{492}$ of its bulk.
Makes absolute 0 carried
on 492° below 32° F. P.
Waves annihilate gas.
Solids exc. Alumina contracts in
Fire. 2. Forms Crystals. Some Substance
Expand & others will Contract Liquid
Excep. 1. H2O. 32° to 39° decreases
in heat above 39° increases by heat.
Top of water at 39° Ceases to Sink.
Kill all fishes, all Rivers would
freeze. 2. Change of aggre-
tion. Changes from Solids to Liquids
Increase of bulk. Excep. Ice in
melting. 2. Cast Iron in melting
bulk less than when not melted.
Crystalline matter all of these.
Additions of Colone Woodfield.



1. from solid to liquid - temp may be constant for as heat comes in. Capacity increases so → ← opposite forces. Mist

1 lb ice 32°.
1 lb. water 172°
diff 140°.

mixture will be at 32° as hot as melted.
this 140° is called latent heat.
reflects the term. Increase of cap. makes it as much colder as addition of temp. makes it hotter. 1. gravity 2. Cohesion oppose melting, melting + boiling points. 3. pressure of atmosphere resists. 140° different vapor boils at 140°. Elas. force of vapor overcomes pressure of atmosphere.
1 pt. of water makes 1698 pts. of steam. Other wise water would boil if much heat in it.
boiling point. Pure water.
Impurities prevent boiling by attraction

Dickson, Oct. 28th. 1861.

Emphic fever not as separable
as one would think. Blending
of types Comes from a
Causes. No accident of the case
as yellow fever when hatches down
Simpson says develops typhus
when ventilated returns to yellow
fever. Common catarrhal typhus
by ventilation into typhus. Confined
air gives continued fever, Spasse
pulsation (with bad air) gives
periodic. - We have diminished
changes in the body in disease
we have to handle &c. Enormous
effects. Rhythm. I have

never seen recurrence of infection in sleep in Malaria. Yellow fever about equal nights & days. All have their crisis = culminating point of an acute disease, typhus needs day typhoid weeks, yellow hours. Latency, inception. Not critical days but day. Malaria &c, have periods of fever by night but not so. But we are speaking of progressive fevers. Fever never goes into decay. Hale (?) believes in self-limiting one that will not go beyond a certain limit. Common intermittent is this & also unlimited, circuit. Relapses go on & on. Goode says one of 7 years. But cut it short if possible. Stone under head examination not to be interfered with

Cur as to the rest pitch in. Mild cases Aur to be let alone. Jaundice. death. Yellow fever Hæmorrhage. Some fevers Lesion Intestine or harm to liver.
